

Jawalkar Sreenam Darshan

Programmer Analyst (SDET) • Java • Selenium • Cucumber • BDD • Agile
darshanj590@gmail.com | +91-9177184582 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Professional Summary

Programmer Analyst and SDET with 1+ years of professional experience at Cognizant, delivering automation frameworks and quality engineering for Fortune 500 clients including Ford Motor Company and UPS. Specialized in Java-based test automation using Selenium WebDriver, Cucumber BDD, TestNG, and RestAssured. Experienced in full STLC execution — functional, regression, smoke, sanity, SIT and UAT — within Agile Scrum environments. Recognized Top Performer for delivering 100+ defect-free automated scenarios across enterprise release cycles.

Technical Skills

Testing: Selenium WebDriver, TestNG, JUnit, Cucumber (BDD), JBehave, RestAssured, Postman, JMeter, TDD

Languages: Java, JavaScript, Python (fundamentals)

Databases: SQL, PostgreSQL, Couchbase (NoSQL), MongoDB, DynamoDB

Tools & CI/CD: Git, GitHub, GitHub Actions, Maven, Azure DevOps, CI/CD Pipelines

Backend: Spring Boot, REST APIs, Microservices Concepts, JSON, XML, HTTP Protocol

Cloud (AWS): EC2, S3, IAM, VPC, RDS, Lambda, CloudWatch

Messaging: WMQ, SFTP, Message-driven Architecture, Distributed Workflow Validation

Methodologies: Agile Scrum, Kanban, SDLC, STLC, Defect Lifecycle Management

CS Fundamentals: Data Structures, OOP, System Design Basics

Work Experience

Programmer Analyst (SDET) | Cognizant Technology Solutions, Chennai | Oct 2024 – Present

Client: UPS (United Parcel Service) — Address Analytics Application | Java, SQL, Couchbase, WMQ, Cucumber, Azure DevOps

- Developed and maintained 60+ BDD automation scenarios using Selenium and Cucumber, integrated with Azure DevOps CI/CD pipelines — reducing manual regression effort by 35%.
- Validated complex backend data processing workflows using advanced SQL queries, reducing data discrepancies by 30% across SIT and UAT environments.
- Engineered end-to-end validation of WMQ message-driven workflows and SFTP file-based integrations, achieving full payload coverage across 3 deployment environments.
- Performed root-cause analysis using transaction identifiers and application logs, proactively resolving integration issues before production impact.
- Managed test lifecycle and defect traceability in Azure DevOps ensuring full CI/CD governance across release cycles.
- Executed and maintained automated test suites on Citrix virtual machine environments, ensuring consistent test execution across distributed infrastructure.

Client: Ford Motor Company — Mo-ISIS SV2 Migration | Java, Selenium, TestNG, Azure DevOps, Agile

- Automated 100+ regression scenarios using Java and Selenium WebDriver, reducing manual validation effort by 40% and improving regression stability across sprint release cycles.
- Built reusable test utilities and data-driven testing infrastructure, reducing test authoring time by ~30% and improving framework maintainability.
- Diagnosed and resolved functional defects using execution logs and reports, accelerating defect resolution and reducing average bug turnaround time.
- Delivered functional, regression, smoke, and sanity test cycles within Agile sprints — contributing to on-time delivery of 3 major release milestones with zero critical production escapes.

- Recognized as Top Performer for delivering 100+ defect-free automated scenarios and outstanding contributions to the Mo-ISIS SV2 Migration program.

Projects

React Product Dashboard GitHub: github.com/JSREENAMDARSHAN/react-product-dashboard Live: leafy-klepon-fcb0ed.netlify.app

- Built a React.js dashboard to fetch and render structured product data from public REST APIs, with 5+ real-time filter and search dimensions for fast user querying.
- Architected a reusable component library reducing UI code duplication by 40% and ensuring a consistent, responsive layout across all screen sizes.
- Deployed via Netlify with GitHub Actions CI/CD pipeline, enabling continuous delivery on every push with zero manual deployment effort.

Full Stack Employee Management System GitHub: github.com/JSREENAMDARSHAN/employee-management-system

- Built a full-stack CRUD application using Spring Boot and React, demonstrating end-to-end client-server integration with RESTful API communication.
- Designed layered backend architecture (Controller, Service, Repository) reducing codebase complexity by 25% and improving long-term maintainability.
- Implemented reusable React components with Hooks for dynamic UI state management, enabling faster feature iteration across the frontend.

Education

B.Tech in Computer Science and Engineering | CGPA: 9.14 / 10.0

Sree Vidhyanikethan Engineering College, Tirupati | 2020 – 2024

Certifications

Java Selenium Automation Framework — Cognizant Academy | Feb 2026

Git and GitHub — Cognizant Academy | Feb 2026

Spring Boot Fundamentals — Udemy / Self-directed | 2025 – Present

AWS Cloud Virtual Internship — AWS | Jul 2023

Achievements

- Awarded Top Performer at Cognizant for delivering 100+ defect-free automated scenarios and outstanding contributions to the Ford Mo-ISIS SV2 Migration.
- Secured 100% Score in Cognizant internal coding assessment — ranked among top performers across the entire batch.
